Look no further than Valley Vista

If you are looking for Poll Dorset rams which will produce lambs for every market then you should look no further than the Valley Vista stud. The Valley Vista Poll Dorset stud was founded in 1976 and moved from its original home at Burrumbuttock, New South Wales, to Coolac, NSW in 1990. The stud was expanded in 1991 when Valley Vista stud principals Andrew and Donna Scott purchased the entire Meadow Creek stud from the late Ernie Britt. There was further expansion for the stud in November 2006 when the Scotts purchased 550 ewes and stud sires from the Gererdan stud, which at the time was among the top studs in Australia. In 2008 Joe, James and Luke Scott founded the Valley Vista Park stud with the purchase of 18 stud ewes at the Kismet dispersal sale. The Scotts have continued to add to their genetic base over the years with purchases of genetics from the Armdale, Armdale Park, Tattykeel, Hildon, Kurralea, Graythorn, Springwaters and Derrynock studs. Combined the studs have built the numbers up to approximately 1000 stud ewes. This provides good numbers to select from, allowing the stud to cull heavily.

When selecting rams for their stud's breeding program the Scotts have placed emphasis on traits such as ease of lambing and high growth rates. They also place emphasis on producing a well-muscled and structurally correct sheep. One of the main selection criteria is selecting for high growth rate. All lambs are weighed at weaning and then twice more at thirty day intervals. These weights are converted to grams/day. Lower than 300 to 350 grams/day are culled. The lambs doing better than 300 to 350 grams/day (depending on the season) are retained in the stud. The stud also scans all rams, using Stockscan, for muscle area and individual data on each animal. Scans are also combined with further data recorded on-farm to produce up-to-date Lambplan figures.

The family and the flock continue to grow with an increased number of stud lambs hitting the ground this year, building numbers up on the back of consecutive good seasons. We've also increased the number of on-property sales, adding a January auction and including ewes in the offering. What has decreased is the age they are turning off rams, moving more in-line with their clients needs and industry markets. A majority of the rams offered at Valley Vista are now 12 months old or younger, which has been well received by their commercial clients, a majority of which use them over Merino ewe flocks. The younger aged rams now give clients a better opportunity to utilise the very best genetics. It also gives them a chance to see the early development of the sheep, which is what they are after when breeding for the sucker lamb market.

Valley Vista held its inaugural summer sale in January 2022, offering 2021 spring-drop rams at just nine to 10 months, as well as a selection of mixed-age scanned-in-lamb stud ewes.

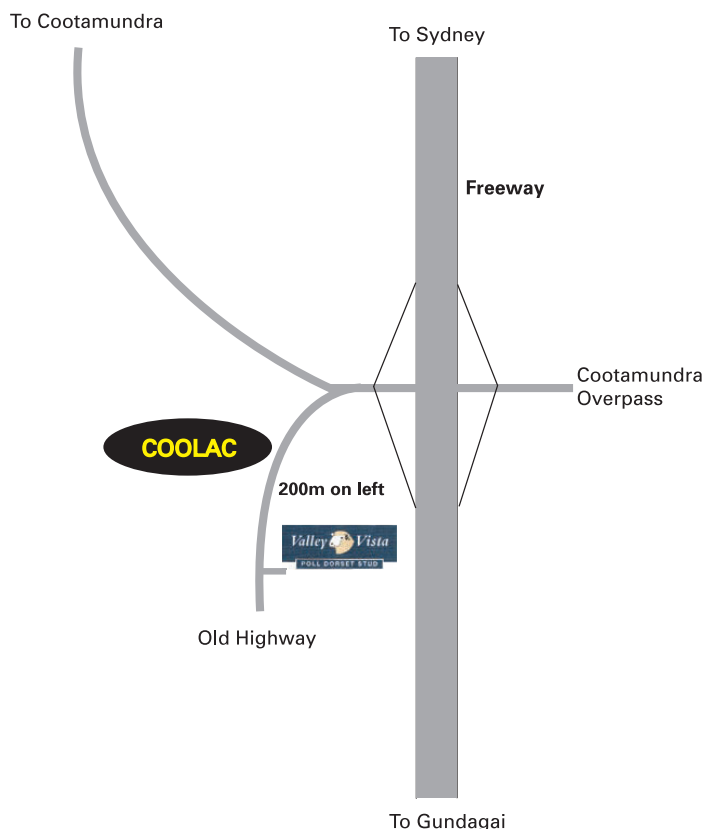

The results achieved from both were above expectation, and showed it was a step in the right direction - we sold a total clearance of 38 ewes to a top price of \$3600, averaging \$1978, and all 88 rams for an average of \$2685, topping at \$4600 twice. The strength of ewe sale was a particularly strong vindication of Valley Vista's breeding objectives, and sire selections, with most SIL to \$32,000 ram Tattykeel 200274.

Valley Vista has been involved in the Poll Dorset Research Flock, Bowan Park, for the past few years, and in 2021 nominated our homebred sire Valley Vista 200086, as well as a sire we purchased in 2018 and have used widely in the stud, Tattykeel 170400. The trial collected carcass data from 12 lambs per sire in 2021, including intramuscular fat (IMF) levels - a measure of the chemical fat percentage in the loin muscle of a lamb, and the visible marbling. IMF impacts the eating characteristics of lamb, including flavour, juiciness, tenderness and overall liking. The two rams entered by Valley Vista in the Bowan Park trial sired lambs with the highest average IMF percentages of the cohort - 4.77 per cent and 4.98 per cent. The industry mean average at the time of collecting the data was 4.3 per cent.

A focus on the true commercial traits of early growth and consistency have shone through at Valley Vista Poll Dorset stud in 2023, with lambs selected as the best at the NSW Dorset Championships, at the Australian Sheep & Wool Show and again at the Australasian Dorset Championships. Most impressively, five-month old ewe lamb, Valley Vista 230207, was awarded the National Poll Dorset Champion of Champions Ewe for 2023, coming up against major award winners from across the country, all of which were mature sheep. And in a true testimony to the years of breeding at Valley Vista, the champion ewe was sired by Valley Vista 210155, a ram which won the National Poll Dorset Champion of Champions Ram at the same event in 2022.

How to find Valley Vista

Take the Coolac/Cootamundra turn off from the new Hume Freeway, turn left at the Coolac Pub and Valley Vista is about 200m on the left

Sale Sire Summary 2024

VV138-14 'FYFE': Another Son of the great VV38-09. Producing a very exceptional line of progeny. Supreme Poll Dorset Ram at AS&WS 2015.

VV493-19: By SW250-27, this is another low-birth weight sire. He's a clean pointed ram that has also bred exceptionally well in his first season at Valley Vista.

VV6-21: A Tattykeel 400-17 son that had a very successful show career and has backed it up by producing some great sons. A real industry leading sire that was a standout at weaning and continued through to be one of our carcassed and correct rams at Valley Vista. Will be used heavily over the years.

VV79-21: The best son of VV Fyfe we have bred, used heavily in our AI program. Very structurally sound sire that has also won many awards and sold to \$10,000 to Bygo Poll Dorset stud in 2022.

VV155-21: The most successful ram on the show floor bred at Valley Vista to date. Nationally Champion of Champions Poll Dorset Ram of 2022, having won a swag of accolades. Will play a big role in the future of Valley Vista. A sire full of length, muscle and bone, his sons are very very impressive, do not miss out.

Tattykeel 90-14: Purchased to continue our Tattykeel family. Was an outstanding ram lamb weighing 85kg at 5 months old. Champion Ram Lamb Australasian Dorset Championships 2014.

Derrynock 33-18: Purchased for \$19,000 for his high indexing LambPlan data and impressive growth PEMD, and overall index.

Hillden 110-19: A prominent AI sire at Valley Vista, with an impressive show history. Has produced sons with presence and length, and we couldn't look past using him again after the performance of his first joining.

TAT 274-20: Purchased for \$32,000 from Tattykeel in 2021, powerful bodied sire with all the traits that the Poll Dorset breed needs.

2022 Champion of Champions Poll Dorset Ram Valley Vista 210155. The number of sons this ram has in this sale is testament to how well he's been performing in the Valley Vista program, passing on his outstanding growth and carcass attributes.

Valley Vista 210155

Ewe Family Breeding Lines

Valley Vista ewe family breeding lines are indicated by their swing-tag colour. Sires are written above the ewe ID number on swing tags, and are also listed in the catalogue.

Red

This is Valley Vista's Tattykeel based family, consisting of hire quality sires purchased over the years including TAT90-14, TAT222-04, TAT400-17 and most recently this year's \$32,000 purchase TAT274-20.

Green

Green is Valley Vista's oldest family line, based around the Armdale and Armdale Park bloodlines. Currently the most prominent sires in this family are VV138-14 (Fyfe) and VV38-09. This is our most dominant female breeding line, producing ewes that's progeny are standouts each year.

Purple

This is our New Zealand connected family, consisting of NZ sire purchased Huntington 33-03 (Wombat) and sons we've retained of his.

White

White indicates the Valley Vista Park prefix, which contains a mixture of bloodlines; you can refer to their sire numbers on top of the dam ID swing tag for their connections. Lots of outcross genetics in this line.

Yellow

This line are daughters of Derrynock 33-18, who was purchased for \$19,000 and bred on with a focus on Lambplan ASBVs.

Orange

Orange are the Springwaters 250-17 (Taz), another new sire purchased and producing a new family line in recent years.

Joining Sires

All joined sale ewes were pregnancy scanned on Wednesday 20 December 2023, to lamb early April 2024. Ewes have been running with rams up until date of sale. Ewes will be scanned again the day prior to the sale and any updated information provided on the supplementary sheet.

Ivadene 220031: Purchased this year for his outstanding data combined with phenotype. Top 5% for TCP, eye muscle depth and eating quality, as well as top 10% for growth and a low birthweight, this sire is the complete package and the ewes SIL to him will have his first progeny.

VV173-16: A full ET brother to Valley Vista's legendary sire "Fyfe", this ram is still working in the paddock and we have used him in our AI program.

VV6-21: A Tattykeel 400-17 son that had a very successful show career and has backed it up by producing some great sons. A real industry leading sire that was a standout at weaning and continued through to be one of our carcassed and correct rams at Valley Vista. Will be used heavily over the years.

VV79-21: The best son of VV Fyfe we have bred, used heavily in our AI program. Very structurally sound sire that has also won many awards and sold to \$10,000 to Bygo Poll Dorset stud in 2022.

Tattykeel 400-17 (Martin): 1st June Drop Ram Australasian Dorset Championships. His line of sons has caught our eye and will suit both First-Cross and Merino operations.

VALLEY VISTA 210006

The scanned in lamb ewes offer clients a chance to secure Valley Vista 210006 genetics. This ram is one of the favourites at VV, and you can get a preview of what his progeny out of these ewes will look like by his sons in the sale.

ASBVS and Indexes explained

What are ASBVs?

ASBVs are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits. Indexes combine important production traits into one number and are a useful way to rank animals quickly and easily.

ASBV types

Birth Weight (BW)

ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.

Weight (WWT) (PWWT)

ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.

Fat Depth (PFAT)

ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

Eye Muscle Depth (PEMD)

ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

TCP Index

The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

S R S

SCOTTS RAM SHEARING

Based out of Gundagai NSW, Scotts Ram Shearing is willing to travel to provide you with a modern and efficient way of shearing. Give us a call or find us on Facebook or Instagram to sort out all your Ram shearing needs today.

GET IN CONTACT

Give Luke a call on **0402 744 255**, find us on Facebook or Instagram to discuss your location, number of rams and when you would like to shear. We do our best to accommodate your needs.

01

SET UP

No shearing shed is required, but power to run the trailer is essential. The trailer is 2.2m wide and 3m tall, fitting through most gates and can be set up by hooking onto any race or yard set up that is available.

02

SHEAR RAMS

No sedation is required as the Peakhill ShearEzy machine handles large sheep with ease, resulting in less stress for the sheep, in particular reducing damage to the scrotum to ensure sperm quality stays high. Scotts Ram Shearing is perfect for Stud sheep, with us taking extra care on presentation.

03

JOB DONE

Rams can be let straight back into the paddock once shorn, job done.

SCOTT'S SCANNING

PREGNANCY SCANNING OF SHEEP

ULTRASONIC SCANNING ALLOWS YOU TO

- Identify singles, twins & dries
- Manage mob by ageing lambs to split early and lates
- Increase twin survival
- Manage twin bearing ewes to rejoin in good condition
- Select twins as replacement stock
- Sell dry sheep early and free up feed
- Reduce deaths from Pregnancy Toxaemia

"IMPROVE PROFITABILITY"
