Lambplan & Stockscan data available

Look no further than Valley Vista

If you are looking for Poll Dorset rams which will produce lambs for the domestic and export markets then you should look no further than the Valley Vista stud. The Valley Vista Poll Dorset stud was founded in 1976 and moved from its original home at Burrumbuttock, New South Wales, to Coolac, NSW in 1990. The stud was expanded in 1991 when Valley Vista stud principals Andrew and Donna Scott purchased the entire Meadow Creek stud from the late Ernie Britt. There was further expansion for the stud in November 2006 when the Scotts purchased 550 ewes and stud sires from the Gererdan stud, which at the time was among the top studs in Australia. In 2008 Joe, James and Luke Scott founded the Valley Vista Park stud with the purchase of 18 stud ewes at the Kismet dispersal sale. The Scotts have continued to add to their genetic base over the years with purchases of genetics from the Armdale, Armdale Park, Tattykeel, Hillden, Kurralea and Graythorn studs. Combined the studs have built the numbers up to approximately 1000 stud ewes. This provides good numbers to select from, allowing the stud to cull heavily.

When selecting rams for their stud's breeding program the Scott's have placed emphasis on traits such as ease of lambing and high growth rates. They also place emphasis on producing a well-muscled and structurally correct sheep. One of the main selection criteria is selecting for high growth rate. All lambs are weighed at weaning and then twice more at thirty day intervals. These weights are converted to grams/day. Lower than 300 to 350 grams/day are culled. The lambs doing better than 300 to 350 grams/day (depending on the season) are retained in the stud. The stud also scans all rams, using Stockscan, for muscle area and individual data on each animal. This information is sent to SIL (a New Zealand based recording outfit) along with the weight information. This data is processed and comes back with a ranking for ram and ewe lambs. A ranking is also received on the stud ewes which enables for a culling of any ewes that are not producing quality lambs. The stud has now entered the SIL information into Lambplan, and combined with further data recorded on farm has produced up-to-date Lambplan figures. Both studs produce stud and flock rams that produce quick maturing, well-muscled lambs for the domestic market as well as lambs that will go on to the export market. Many of the Scott's clients are benefitting from the great prices received at market with those using Poll Dorset rams over Merino, first-cross or composite ewes being able to sell suckers straight off mum for more than 800c/kg.

Valley Vista 223/20.
Reserve champion ewe at the
NSW Dorset Championships
2020.

ASBVs and Indexes explained

What are ASBVs?

ASBVs (and Indexes) are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits.

ASBV types

Birth Weight (BW)

ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.

Weight (WWT) (PWWT)

ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.

Fat Depth (PFAT)

ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

Eye Muscle Depth (PEMD)

ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

TUBELINE WRAPPER

Looking for a cost effective way of wrapping silage?

- 40% cheaper than individually wrapped bales
- Easier to feed out and less plastic used
- Stores silage effectively for at least two years
- Wraps up to 80 bales of silage an hour
- Bales can still be transported with plastic on

Andrew Scott 0419 208 272

Valley Vista, Coolac, NSW

valleyvista@valleyvista.com.au

Ultrasonic Rib Eye Muscle Scanning In Live Sheep

Fig 1 - Exposed 12th rib on the carcase cut through the last thoracic

Meat Index

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher weighting is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environmental factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep to get an index.

NOTE:

- Current Live Weight = C/LW
- Eye Muscle Area (EMA) is calculated using the eye muscle width and eye muscle depth measurements.

Sire Summary 2020

VV138-14 'FYFE': Another Son of the great VV38-09. Producing a very exceptional line of progeny. Supreme Poll Dorset Ram at AS&WS 2015.

Tattykeel 90-14: Purchased to continue our Tattykeel family. Was an outstanding ram lamb weighing 85kg at 5 months old. Champion Ram Lamb Australasian Dorset Championships 2014.

Springwaters 250-17 (Taz): Has been a very impressive Sire producing a stylish, fast maturing very sound line of offspring.

Tattykeel 400-17 (Martin): 1st June Drop Ram Australasian Dorset Championships. His line of sons in the sale will catch your eye and will suit both First-Cross and Merino operations.

VV58-17 (Mitchell): Champion Ram NSW Dorset Championships and Champion Ram Australian Sheep and Wool Show. A T90/14 son. A very impressive young sire that over the years we hope will breed a sought after line of sons for our clients.

Gereden 292-04: An older sire that we returned too. Along with VV38 and Wombat was used to create connections in our genetics to produce offspring that suit the current market.

VV38-09: One of the most influential sires bred here at Valley Vista. His genetics has played a huge role in the stud over the years.

Huntington 33-09 (Wombat): The imported NZ sire that has produced a line of sons that have been high demand over the years.

VV108-16: Champion ram Canberra Royal. Retained for his clean points and impressive structure.

VV69-16: Son of Tat90-14. Reserve senior ram ASW&S. A ram packed full of meat and muscle.

Goorama 37-16: Purchased for his similarities to the Huntingdon Wombat sire. Produces high growth rate, heavy boned sons.

Tattykeel 971-17 (Shorty): Young Sire used for his muscle shape and early growth.

Notes

2019-Drop Retained Sires

VV493/19. A Springwaters 250 son.
Moderate framed sire with a
great hindquarter.

VV514/19. A T400 son retained
for his excellent structure and
Dorset type.

How to find Valley Vista

Take the Coolac/Cootamundra turn off from the new Hume Freeway, turn left at the Coolac Pub and Valley Vista is about 200m on the left

Valley Vista 7/20.

First shorn ram lamb at NSW Dorset Championships 2020. A T400 son, look out for this sire next year.

SCOTT'S SCANNING

PREGNANCY SCANNING OF SHEEP

ULTRASONIC SCANNING ALLOWS YOU TO

- Identify singles, twins & drys
- Manage mob by ageing lambs to split early and lates
- Increase twin survival
- Manage twin bearing ewes to rejoin in good condition
- Select twins as replacement stock
- Sell dry sheep early and free up feed
- Reduce deaths from Pregnancy Toxemia
